

SVMi-16E

Samsung's New Integrated Voice Processing Platform

Introducing SVMi-16E, Samsung's fully integrated voice processing system. This "in-skin" system combines the features of an auto attendant and voicemail to allow your company to increase its productivity by efficiently managing busy call traffic.

An expansion of our popular SVMi line, the SVMi-16E provides 16 ports and up to 1000 mailboxes for your telephone system. Specifically designed to integrate into Samsung's iDCS 500 system, the SVMi-16E provides multi-language support for up to 9 languages, fax-on-demand and a comprehensive set of features unlike any other voice processing system in the market today.

Combining the SVMi-16E's features with the functionality of Samsung's iDCS product portfolio, Samsung offers feature rich business systems to propel your company into the future.

Voice Mail Features

Answer Machine Emulation Monitor messages being left in your voice mail box through the speaker of your keyset just like screening a call on your home answer machine.

Broadcast Authorized personal can broadcast a message to everyone in the system.

Call Back Press one key and automatically call back the person who left you the message.

Date and Time Stamp Each message received is date and time stamped upon arrival.

Direct Messaging / Quick Memo Easily leave a message for anyone without calling the extension first.

External Notification When you have messages in your mailbox, you are alerted at your cell phone, home phone or a pager.

Individual Mailbox Greeting Each mailbox has its own personalized individual greeting recorded in the your voice.

Message Scan Easily scan your messages. The first few seconds of each message will be played, and then it will go to the next message.

Message Fast Forward and Rewind Easily skip through a message if you are looking for a specific piece of information.

Message Forward With Append Messages can be forwarded to other mailboxes in the system with introductory remarks.

Message Pause Pause the message at any time while listening to your messages.

Message Retrieve Any sent message can be canceled before the recipient has received it.

Message Skip When listening to new messages, you can quickly search for a specific message, and still save all the new messages as new.

Message Undelete Retrieve messages that have been previously deleted that day. No more losing valuable messages by pressing the wrong button.

Message Waiting Light Indication An instant indication on your keyset tells you when you have new messages. Press one button and connect with your voice mail.

Multiple Language Support System and mailbox prompts can be individually set to play one of up to 9 languages.

New or Old Message Selection Access your mailbox and choose to listen to either new or old messages.

Personal Mailbox Administration Change settings for your mailbox any time you like, from any phone anywhere in the world.

Selected System Features

Alphabetic Directory (Multiple) Callers who do not know your extension number but know your name may enter the first few letters of your name and then easily be transferred.

Audiotex Audiotex allows you to provide information only, without giving the option to record a message.

Automatic After Hours Answering The main greeting changes from the day to night greeting automatically.

Caller ID Compatible If you have caller ID, the SVMi-16E captures the caller ID and saves it with each message. Then you can call back the person leaving the message.

Compound or Multiple Document Delivery Any number of fax documents may be linked to form a single fax document.

Incoming Call Overflow You can answer any or all lines immediately or answer only the calls that your operator does not pick up.

Keypad Display and Soft Key You will be able to navigate through the SVMi-16E menus using the keypad display and the soft keys below the display to respond to the prompts.

Recordable System Prompts Add or record some prompts to suit your particular business.

Synchronized Clock The SVMi-16E clock is responsible for providing each message with a date and time stamp. Changing between day and night modes is always synchronized with the phone system.
